

YOUR RESCUE PARTNER

www.hawkaerospace.eu

GUARDING THE SKIES REMOTELY

The Hawk Guardian enables you to carry out and support real-time Search and Rescue in any location (even an inaccessible one) quickly and cost effectively just with a few taps on a tablet.

Able to be fitted with most camera types, our drone system can provide you with a birds-eye view of the area of interest on the ground and over the sea, giving first responders the exact location of victims in any visibility.

Whilst our drone system can detect events on the ground and provide you with the real-time information you need, they can capture this information and video with their respective GPS logs thus providing you with the needed record of such events for any follow-up actions.

Getting There On Time

Bringing New Solutions to the Future of Search and Rescue

Our drones can help you revolutionise your search and rescue efforts and achieve more with less effort and time. Such systems are being used across the world to help locate survivors and victims as well as to monitor any unusual activity.

GROUND CONTROL, DETECTION & PREVENTION

The Hawk Guardian can be operated locally as well as provide remote operational control directly from HQ allowing you to manage your tactics as the situation develops at a much lower cost than alternative methods.

Using a simple easy to understand interface, the Hawk Guardian can be flown by anyone following minimal training. Besides the necessary training we can also provide the assistance required to obtain the necessary certification from your local Aviation Administration. Hawk can help you have your search and rescue unit fully operational for drone use in three to four weeks.

However, should you require, we can also provide you with a complete outsourced service including our highly skilled and experienced pilots so as to have a safe and efficient SAR drone facility without you having to lift a finger.

Hawk Aerospace can also provide you with project specific Incidence Command Systems (ICS) that are designed to your needs. Together with top quality training, supervision and support the Hawk Guardian ICS is the ideal solution to manage any possible scenario.

GET IN TOUCH

Our team at Hawk Aerospace are passionate about Engineering Tomorrow's Technological Solutions for today's evolving problems.

We combine decades of experience in innovation with dedication towards great customer service to provide you with the desired solutions and customer satisfaction.
