3-D Imaging & Storage

The Hawk Minerva mapping system enables you to carry out a full 3-D map of any outdoor sites in any location, even an inaccessible one, quickly and cost effectively just with a few taps on a tablet.

Able to be fitted with most camera types, our drone systems can provide you with a birds-eye view of the property, digitising them into full 3-dimensional maps. These can then be used for virtual, detailed and high-resolution studies of the sites without having to go to the actual site.

Furthermore, The Hawk Minerva System gives you the ability to see how and where the sites are faring through time by comparing 3-D maps periodically thus providing you with the needed record for any follow-up actions.

Innovation Through Digitisation

Bringing New Ideas & Solutions to 3D Modelling

Drone photography and video has revolutionised inspection & conservation efforts. Such systems are being used across the world to help automate inspections of structures and sites both large and small.

INSPECTING, PREVENTING & MITIGATING

The Hawk Minerva provides you with the tools to carry out frequent and repetitive autonomous flight allowing you map large sites at a much lower cost than alternative methods.

Our aerial drone solutions are highly customisable as well as scalable to meet your specific requirements and objectives. From typical High-Resolution Images to detailed Thermal Inspections of any site, the Hawk Minerva is here to help you stay on top of things.

Using a simple interface, the Hawk Minerva can be flown by anyone following minimal training. However, our highly skilled and experienced pilots can provide you with the safest and most efficient monitoring without you having to lift a finger.

GET IN TOUCH

Our team at Hawk Aerospace are passionate about Engineering Tomorrow's Technological Solutions for today's evolving problems.

We combine decades of experience in innovation with dedication towards great customer service to provide you with the desired solutions and customer satisfaction.
