AERIAL DRONE SURVEYING

As a farm manager, using conventional and near-infrared aerial imagery from our Drones, you will be able to detect weak spots in the crop caused by disease much earlier than ground based surveys.

More importantly, using our solutions, you will have access to real-time information of your property whenever you want, at a fraction of the cost of conventional aerial photography.

Such agrarian management allows you to catch weak areas & irrigation leaks in the field early on meaning your harvest could be substantially improved, increasing your overall yield.

Agriculture Monitoring & Management

Bringing New Ideas and Solutions to Expand Farming

The Hawk Saturn can be fitted with a variety of visual systems which allows for a wide range of the visual spectrum to be used to help you detect the healthiness of your crop to maximise the yield of your estate. Your system can operate using the following system

- ✈ Completely Autonomous
- ✈ GPS-guided mapping mission
- ✈ Live-Streaming Interactive Flight
- ✈ Go 'Live' on Demand

Integrated System Solution

Should the Remote Aerial Survey identify any anomalies in your crop, our integrated system will also provide you with the ability to mitigate this as our system can be fitted with the ability to spray your crop specifically to where it is needed, reducing cost.

Using a simple interface, the Hawk Saturn can be flown by anyone. However, should you require, our highly skilled and experienced pilots can provide you with the safest and most efficient monitoring without you having to lift a finger.

GET IN TOUCH

Our team at Hawk Aerospace are passionate about Engineering Tomorrow's Technological Solutions for today's evolving problems.

We combine decades of experience in innovation with dedication towards great customer service to provide you with the desired solutions and customer satisfaction.
