## DRONE DETECTION & INTERCEPTION

Drone technology has drastically altered the way we view the world as it has given us a bird's eye view at our fingertips. Unfortunately, there are many who would use this technology for their own personal gain at the expense of others and this is where the Hawk Overwatch System can help you.

The Hawk Overwatch is built to be fitted around your existing security infrastructure giving you full control. Full integration is key in our philosophy, which is why our system is highly customisable to cover your needs and limitations.

# Keep Rogue Drones Under Control

## Bringing New Solutions to the Future of Perimeter Security

The Hawk Overwatch System has four main functions with which to detect, intercept and control on coming drones:

- ✈ Drone Detection
- ✈ Real Time Tracking
- ✈ Aircraft Type Identification
- ✈ Defeat Device

### RECOGNISE, REACT & CONTROL

The Hawk Overwatch can offer a range of anti-drone jamming technologies to defeat almost any device when it becomes a threat.

Our system can be integrated completely into your existing security infrastructure and create a virtual fence that disables any device that attempts to enter within it automatically.

We can also provide mobile solutions with which an individual can jam as well as take down oncoming drones for both short and medium range threats.

The Hawk Overwatch also provides you with saved data of any past events and drills so as to be able to build a review of what happened to make sure to take advantage from lessons learned.

We provide you with highly skilled and experienced engineers to fully train you and certify your organisation to be able to advise you on your specific operational needs.

## GET IN TOUCH

Our team at Hawk Aerospace are passionate about Engineering Tomorrow's Technological Solutions for today's evolving problems.

We combine decades of experience in innovation with dedication towards great customer service to provide you with the desired solutions and customer satisfaction.
